ABOUT ME

My journey to becoming a software developer was not a straightforward one! Since I was young I always planned on going down the business route. So that was what I did, and while I enjoyed my job, it was not my passion. I discovered software development and found that the parts of my job that I enjoyed aligned with a software developer. I love that it allows me to use my problem solving mindset, and enables me to make a process easier for others. I am looking forward to continuing to grow my knowledge in the tech field!

TECHNICAL EXPERIENCE

Nashville Software School — Software Developer

January 2021 - PRESENT

A six month full stack web designer apprenticeship focusing on full stack development fundamentals and problem solving

- Create applications using CRUD features
- Utilize API's to store and fetch data
- Project management with issue tickets and GitHub Projects

PROJECTS

PlanB Events – Django/React Full-stack Capstone

PlanB Events is a full stack app that has 2 types of users. A vendor, who is able to create a product/service available to customers. A customer, who can create an event with a budget in mind and add options available, provided by the vendors, to plan their event while staying on budget.

- Single-page app
- Full CRUD functionality
- Django REST framework

Axe Games – React

Front-end Capstone

Axe Games is an app that allows axe throwers to save and keep track of their scores. The app was created so when throwing axes in the backyard the users can create some friendly competition!

- Single-page app
- Full CRUD functionality
- JSON server used for local database
